NARRATIVE REPORT

☒ INTERIM☐ FINAL

Item 1 and 2. No change since 14 July status report on Printer # 2 since stop work order has been in effect.

Printer # 1 (GIMRADA) was delivered to AMS on 14 July 1966 for acceptance tests. As of 12 August about 12 working days had been lost on testing of printer # 1 due to:

- (a) rupture of the outer air bag
- (b) inaccuracy of the film metering system
- (c) misalignment of film preview and punch station.

During the next three weeks [] and [] attempted to correct three major deficiencies that arose after resumption of acceptance tests:

- (a) exposure control - lights still gave a systematic pattern effect.
- (b) raw stocks metering still inaccurate
- (c) preview and punch station alignment error ± 75 microns and higher (design calls for ± 5 microns total error).

The alignment problem is still unsolved and a meeting is scheduled for 8-9 September to see what can be done to rectify the situation.
